2nd Assignment
Subject: Physics II (Electrodynamics)
Date: 20th March 2017

1. **Compute the divergence and curl of the following vector fields.**

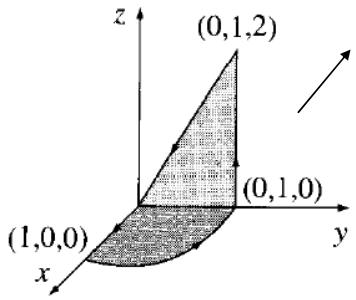
   (i) $\vec{F} = \rho(2+\sin^2\phi)\hat{\rho} + \rho\sin\phi\cos\phi\,\hat{\phi} + 3z\hat{z}$

   (ii) $\vec{F} = (r\cos\theta)\hat{r} + (r\sin\theta)\ \hat{\theta} + (r\sin\theta\cos\phi)\ \hat{\phi}$

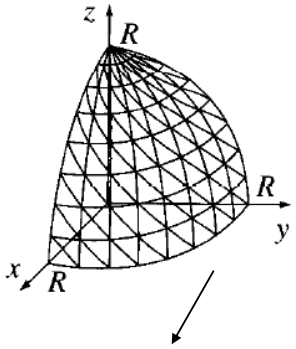
2. **The vector field is given in Cartesian co-ordinate system,** $\vec{A} = xy\,\hat{i} + (3x^2 + y)\,\hat{j}$ **. Write down the vector field in cylindrical co-ordinate system with** $\hat{s}, \hat{\phi}, \hat{z}$ **unit vectors.**

3. Compute the line integral of

$$\mathbf{v} = (r\cos^2\theta)\,\hat{\mathbf{r}} - (r\cos\theta\sin\theta)\,\hat{\boldsymbol{\theta}} + 3r\,\hat{\boldsymbol{\phi}}$$ around the path shown in Fig.



Check your answer, using Stokes' theorem

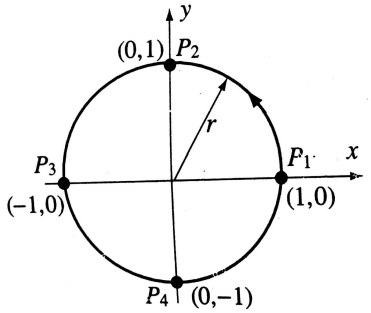


4. Check the divergence theorem for the function

$$\mathbf{v} = r^2\cos\theta\,\hat{\mathbf{r}} + r^2\cos\phi\,\hat{\boldsymbol{\theta}} - r^2\cos\theta\sin\phi\,\hat{\boldsymbol{\phi}},$$

using as your volume one octant of the sphere of radius R Make sure you include the *entire* surface.

5. Consider a vector field, $\vec{A} = -y\hat{i} + x\hat{j}$ **. Calculate closed line integ along a circular path of radius 1 in anti-clockwise direction.**



6. Draw the following vector fields on XY plane.

(i) $\vec{V} = s\sin\phi\hat{\phi}$

(ii) $\vec{V} = \cos\phi\,\hat{s} + \sin\phi\,\hat{\phi}$
